

DEFORESTATION

MEEL PALIALE

It is a well-known fact that deforestation is a huge problem.

Right now it is important to prevent taking down forests. Loss of forests means loss of species. It also contributes to global warming.

About 20 percent of the world's greenhouse gas emissions come from the clearing of tropical forests. Estonia is perceived to be a very eco friendly country but in reality our forests are in the worst shape they have ever been and managed by people who only care about money.
